The New Style Door Factory was founded in 2002.

Over 18 years, we've expanded our product range up to 57 models, combined into 13 collections. The productive capacity of the factory is more than 6000 door leaves per day. Such pace of work easily meets the ever-growing demand. New Style Door Factory's dealers work in every corner of Ukraine.

The interior doors of the New Style Door Factory meet the different tastes of our customers. Our product help to create comfort and beauty, at the same time highlight the chosen style of interior and delight homeowners. We care about our customers so that manufacture our products using the latest technologies, quality and safe raw materials, and with appreciation and understanding of each customer. Our main value is the team of real professionals - engineers, designers, craftsmen, workers, sales managers, and executives work to meet YOUR needs in home-comfort. For this purpose, we design the most ergonomic and reliable constructions, create attractive colors and decors, and choose among them the best one. We work to ensure that comfort, style, and beauty are accessible to everyone in Ukraine and all over the world that why our doors are the best price-quality ratio. Everyone, from the connoisseurs of beauty with sophisticated taste and unlimited possibilities to those who want to create a masterpiece with a limited budget can find something suitable in our brand New Style Door Factory.

The goal the New Style Door Factory is to satisfy the customer's need for stylish, ergonomic and beautiful interior doors. For this purpose, our experienced team creates, tests and produces new ideas that meet the latest trends in the world of fashion and design. We create the new door constructions, improve the properties of the models, design new collections, and unique door covers. As a result, each consumer completes its interior with the most successful models.

We are constantly working on the extension of the productive capacity of our factory, the opening of new market possibilities and expanding our sales regions. Our purpose is to be the leaders not only on Ukrainian but also on the world market of interior doors. To realize this purpose, we are constantly improving our services and establishing a reliable, extensive dealer network.

# The construction of stile-and-rail doors

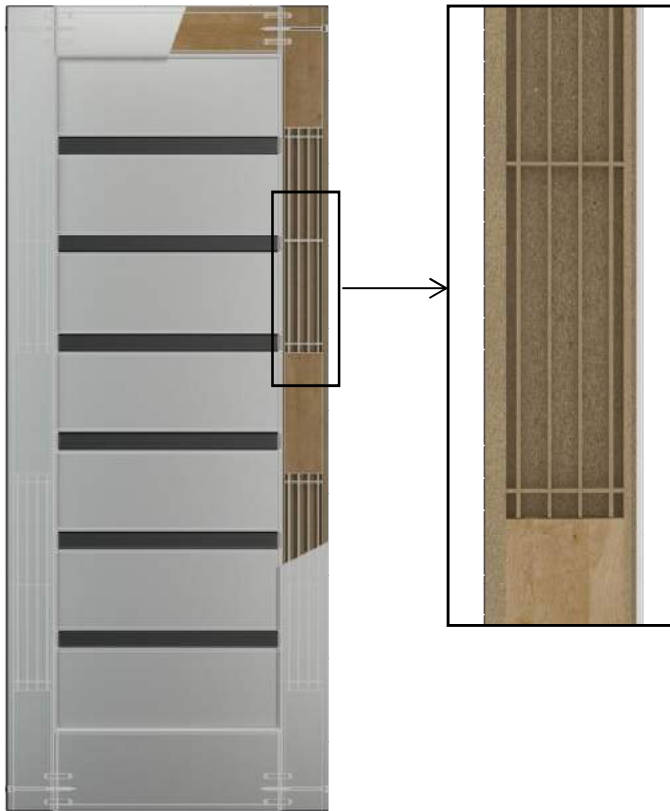

Stile-and-rail doors consist of the stiles, rails, and panels joint by coupling screws on special equipment. Stile could be produced of wood plus honeycomb filler MDF (Medium Density Fiberboard) or just wood (by request).

We constantly improve our factory and modernize production, so now we are also able to produce assembled doors without coupling screws, which allows facilitating the construction without loss of strength, and simultaneously to improve the aesthetic properties of the door leaves (technology used only in Collections “Elegant”, “Nostra”, “Maestra”, “Italiano”).

Stile-and-rail doors are produced using edgeless technologies. This allows covering by decor each element separately. The stile-and-rail door leaf design allows replacing of certain parts in the case of damage. The door leaf perimeter has its own strengthened features, which generally give a tangible result during daily operation over the years (up to 50 years of service life).

## Advantages of the stile-and-rail door leaves with wood and MDF honeycomb construction (Italian technology)

### The advantages of this technology:

-  Ample structural rigidity of the elements, lower weight of the leaf compared to a wooden construction;
-  The reduced weight of the door leaf allows transporting more products at the same time;
-  Allows you to reduce the load on the locks, hinges, and, as a result, increases the service life of door accessories (hardware);
-  Minimizes the possibility of sagging and skewing of the door leaf, that can lead to repair or replacement;
-  Eliminates the possibility of deformation and curvature in cases of influence of temperature and humidity changing;
-  Resistance to bending moment (ability to restore position after mechanical action);
-  The door leaf undergoes multi-stage quality control, as well as tests resource on a test-stand in the format "closing-opening with a pressure". Test results show that doors stand 55 thousand cycles. This guarantees a minimum claims and complains or their complete absence;
-  Reducing the use of wood contributes to the conservation of green spaces - the "lungs" of our planet

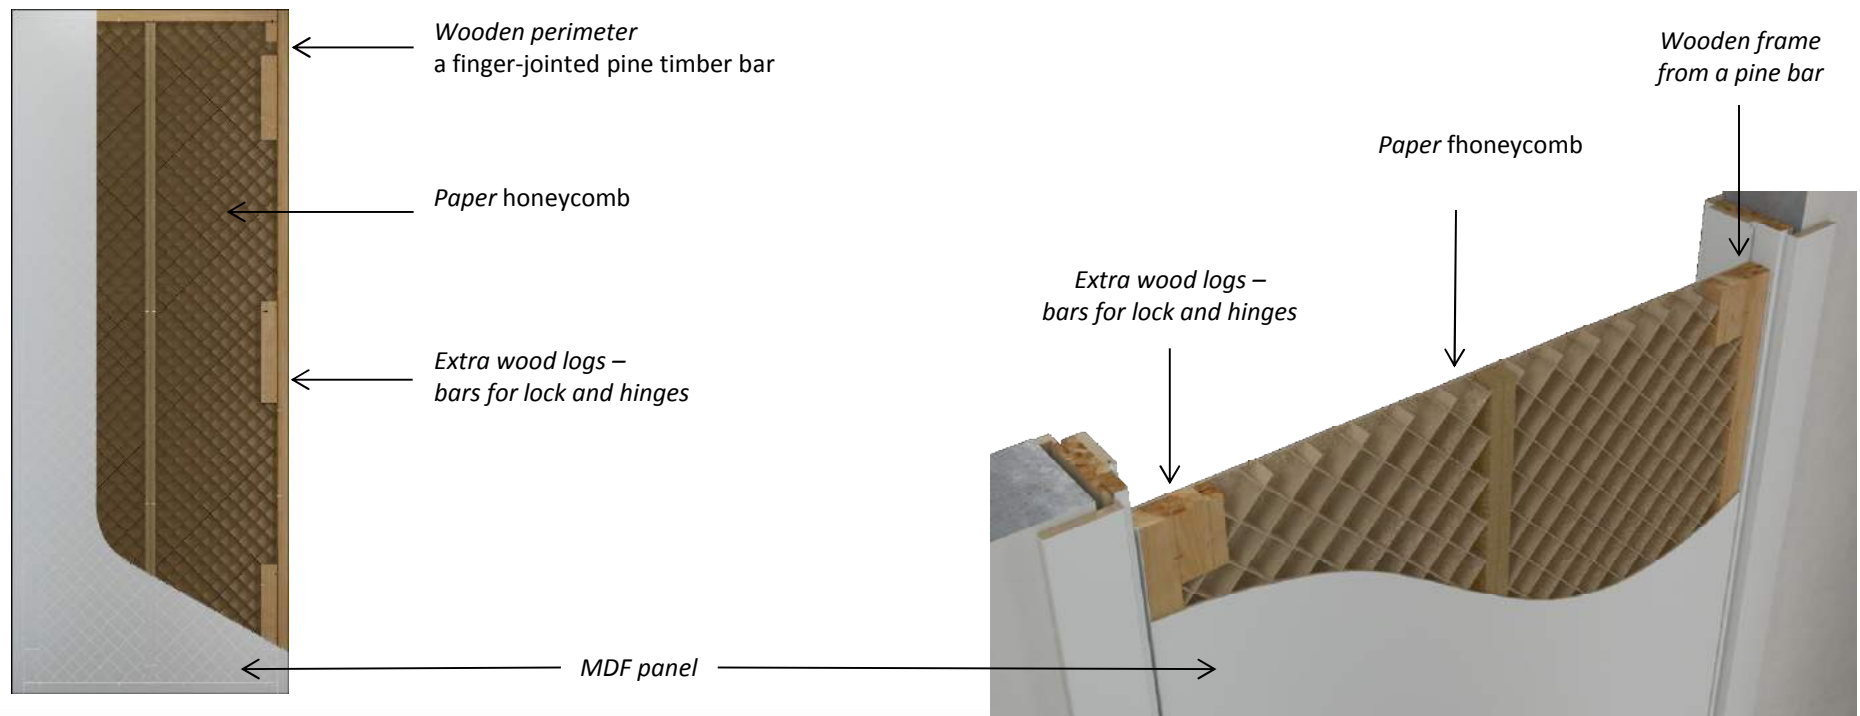

# The construction of flush (hollow-core) doors

Flush or hollow-core door leaves have a perimeter from a finger-jointed pine timber bar measuring 28x34 mm. To increase the mounting of mortise elements on the door leaf in the place of the insert of the lock and hinges installed two wooden logs.

The cavity of the flush door leaf is filled by paper honeycomb with a density of 125 g/m<sup>2</sup>.

The high-quality honeycomb filling makes the door both lightweight and strength. The perimeter is cased by panels: MDF (Medium Density Fiberboard) with a thickness of 3 mm and a density of 750-850 kg/m<sup>3</sup> in the collections "Kvadra" and "Modern"; HDF (High-Density Fiberboard) with a density of 1000 kg /m<sup>3</sup> (in collections "Simply" and "Fortis" — panels-skins, which have stamped molded elements, the structure of wood is formed by vacuum pressing).

The edges of the flush door leaf covered by PVC foil with a 0.5 mm thickness that significantly increases the door's resistance to mechanical damages.

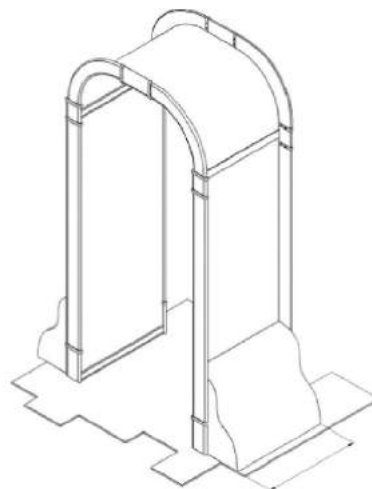

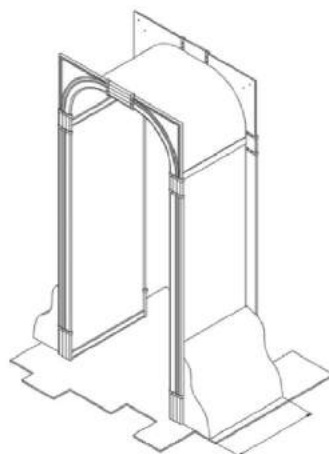

Arch "Romanian"

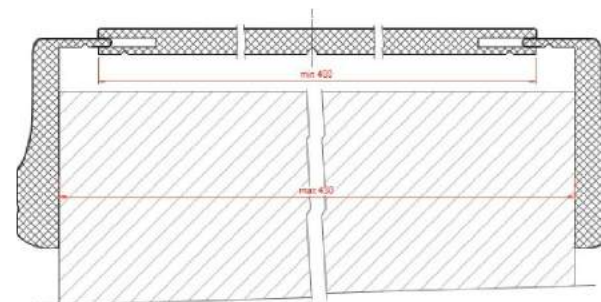

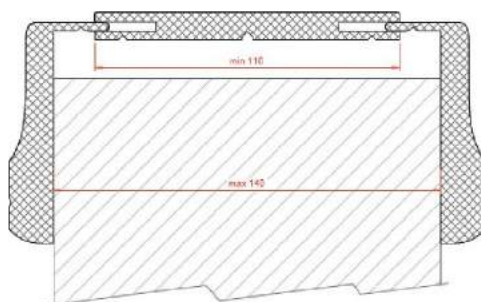

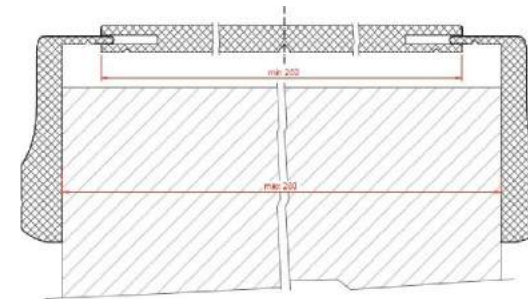

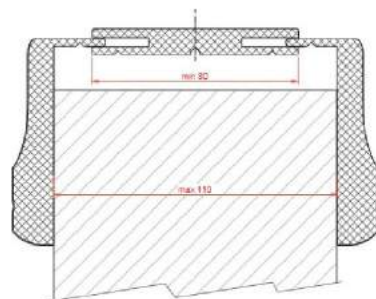

Arch "Lux"

*The arches are installed in structural openings up to 2400 mm high and from 660 mm to 1260 mm wide. Hole depth is from 200 to 600 mm.*

# Ecowood

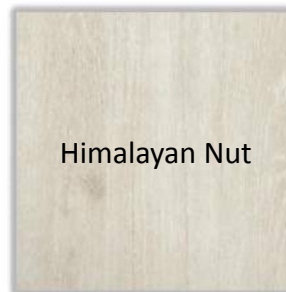

The innovative Ecowood finishing is long-lasting color and has high moisture resistance, is eco-friendly, safe for human health at all stages of production and during use. For this collection, our designers have developed a modern color palette. It including the following decors: Himalayan nut, Scandinavian nut, European nut, Siberian nut, Norwegian nut. Type of glazing: Sateen, Bronze, Graphite. The surface of the door leaf covered by this decor resembles natural wood, that smooth and pleasant to the touch, without the feeling of artificial covering and resistance to mechanical damages.

European Nut

Scandinavian Nut

Himalayan Nut

Norwegian Nut

Siberian Nut

# Polypropylene Premium

Polypropylene finishing for interior doors of the New Style Door Factory has the following advantages:

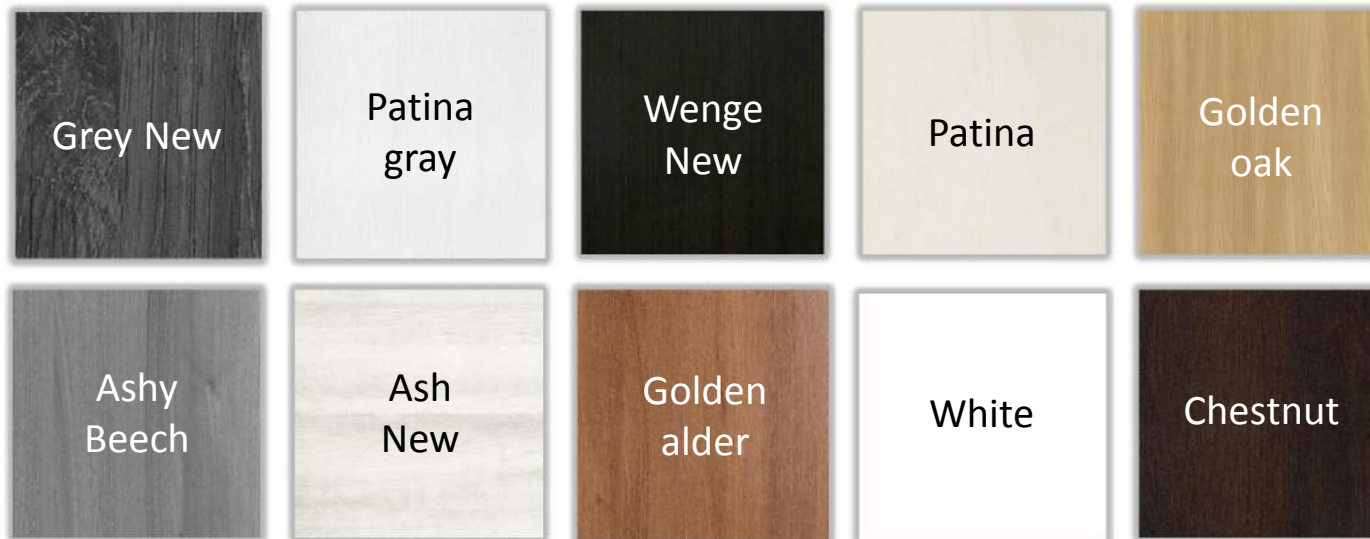

- Eco-friendly, safe for human health at all stages of production and during use. There are no chlorine and halogen compounds in its composition, so polypropylene covering does not emit toxic substances and does not pass formaldehyde;
- The surface of the covering is smooth and pleasant, resembles the surface of the treated wood;
- It a pleasant on touch feeling of warmth, that does not give the impression of artificial or “cold” doors, as it happens with other polymeric materials;
- The special varnish covering makes it is more resistant to mechanical damages (scratches and scuffs);
- It doesn't formed cracks and color changes on bends. Whiteness and gloss remain unchanged, even during long-term use;
- The use of natural pigments and dyes allows exposing the door to thermal recycling.

# PVC DeLuxe

PVC DeLuxe is a polymeric finishing for interior doors, resistant to temperature extremes, ultraviolet light, mechanical damage, and moisture. PVC Decor imitates the structure of natural wood grain, doesn't change color. The absolute advantage of PVC DeLuxe is its saturation and variety of colors. Interior doors in PVC decor are difficult to distinguish from solid wood or veneer doors. The only thing that sets them apart is a light glossy shine that resembles a lacquer covering. This coating has the following advantages:

- Durability;
- Resistance to influence of external factors;
- Ease of care;
- Variety of patterns, textures, and colors;
- All doors of the same color do not differ in shades (there is no unevenness in one shade).

# PVC VIVA

PVC VIVA is a modern innovative vinyl film. The polymeric finishing of interior doors is resistant to temperature extremes, ultraviolet light, mechanical damage, and moisture. PVC VIVA decor is virtually impossible to distinguish from the wooden coating, does not change color. The advantage of PVC VIVA coating is the saturation and variety of colors that clearly repeat the natural wood grain.

Covering has the following advantages:

- Resistance to influence of external factors;
- Durability;
- Variety of patterns, textures, and colors;
- Ease of care;
- There is no difference in one shade.

# SmartCover

Creating a new, modern PVC decor, our priority its aesthetic qualities, utility, and safety. The new SmartCover series of decors has been created with an appreciation for our customers. We were inspired by the beauty of pearl overflows and combined the traditional texture of natural wood with a pearl shimmer. A matte silver gloss turns a standard decor item into a royal, design element. Doors in “SmartCover” coating are durable, reliable and stylish. They look gorgeous, so they would become an adornment even of the royal palace. The eclecticism of styles, embodied in the idea of the SmartCover line of decor, makes it versatile. The palette of the collection is suitable for any design direction. Thanks to the noble ebb and the usual range of colors, it complements the classic interiors, and the use of modern materials and production technologies makes it perfect for new design directions, such as techno, neo-classical, art nouveau.

SmartCover is designed with care of the environment and does not emit toxic evaporations either during the use or production of the doors. Each color of SmartCover decors is thought out to the smallest details, selected with taste and sense of style.

# PVC ULTRA

PVC ULTRA is the new color palette of polymeric finishing New Style Door Factory. The decor is resistant to temperature extremes, and the influence of sunlight, damage from strokes and scratches. The refreshed range of colors accurately imitates, visually and on touch, the texture of the wood. PVC ULTRA colors look natural and most closely to natural wood. PVC ULTRA doors are difficult to distinguish from solid wood or veneer doors. The coating has the following advantages:

- Long service life;
- Resistance to influence of external factors;
- Easy to care - can be wiped with a damp sponge with a mild soap or alcohol solution during cleaning;
- Fresh, natural shades;
- All doors of the same color do not differ in shades (there is no unevenness in one shade).

PVC ULTRA is a practical alternative to expensive natural coverings, equivalent in terms of ergonomics, safety, and aesthetics. PVC ULTRA finishing is a fresh look at Eternal.

Oak Smoky

Oak Honey

Oak Milky

Oak Muscat

Oak Grey

# Ecoveneer

Ecoveneer is an innovative decor made using ongoing pressure intention coating technology. The main raw material for this coating is the smallest parts of wood glued together by a polymeric binder under pressure. The material for the future decor is colored at the stage of mixing the components, so the decors in this series don't have the difference in shades. Ecoveneer also has perfect aesthetic properties, in particular, the effect of hi-tech. This means that the decor imitates the natural wood texture as accurately as possible, has a matte sheen, and pores and relief are palpable.

Ecoveneer has the following advantages:

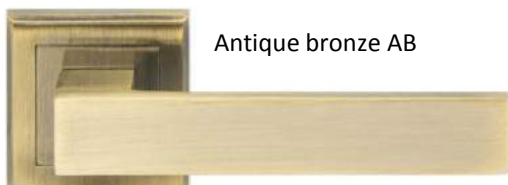

- Detailed veneer imitation at a lower price. The difference cannot be determined at first sight or even by touch;
- Increased resistance to moisture and steam for 24 hours. Allowed using wet clean;
- Certified according to international environmental and safety standards.
