

beeva

The BEEVA group comprises 3 structures that complement each other in pursuit of the same purpose: **Foodtech**, with technology and innovation as an ally for the valorization and diversification of beekeeping products, **Institute** - promoting the sustainable development of Brazilian biomes, their culture and preservation of the environment and Technological Reference Unit, as an instrument for advanced management of beekeeping and demonstrative social technology.

Its purpose is to support socioeconomic development in northeastern Brazil, more specifically in the semiarid region by structuring and developing the beekeeping production chain.

The search for uniqueness guides our daily lives, through the search for constant innovation in all products that will be positioned on the market, either through the implementation of social technologies with the company's partner producers, or in the communication of stories that will be told by behind each product developed;

Our mission is to support the reduction of social inequalities and the preservation of Brazilian biomes, with the Caatinga as the star biome.

caatinga honey

Beeva presents its line of honey products from the caatinga biome, produced in this exclusive and rich biome present in northeastern Brazil. Honey, a special flower food in a cycle of approximately 2 months, has unique colors, flavors and aromas. It can be used to strengthen the immune system and improve digestive capacity, as well as being a natural source of energy. In gastronomy, its use is abundant in several possibilities of recipes and to sweeten naturally.

atlantic forest honey

Beeva presents its line of wild honey products from the Atlantic Forest, which stand out for their greater availability on the market, as this bee pasture is offered to bees throughout the year. Wild honey comes from different flowers and is recommended for different uses, from use in various gastronomic recipes to functional activities. Wild honey from the Atlantic Forest is rich in minerals, acts as a soothing and detoxifying agent.

propolis

propolis line

propolis

Beeva presents its propolis line, a product that offers numerous benefits to human health. Propolis is a mixture of resins collected from shoots, buds and plant exudates, plus bee saliva, wax and pollen. It is considered a natural defense product, its function is to seal the entrance and cracks in the hive, preventing the access of insects, bacteria and fungi. Studies prove that propolis can be used in several treatments and is considered a great antioxidant, in addition to having antifungal, antibacterial, antiviral and immune system reinforcing properties.
