

PROFILLS[®]

Packing the World!

We're a young and bold company, that manufactures filling machines for liquid and solid products, utilizing cutting edge technology and the best components, with over 1000 machines up and running throughout Brazil and overseas, working on a myriad of products and industries.

A growing market needs a superb supplier to meet its demands, both nationally and internationally, for this reason we work tirelessly in the search for new packing solutions.

Our team composed of highly qualified professionals, ensuring our clients satisfaction. We work closely with our partners, making food safe and available, everywhere.

It's for you that we develop the very best in packing and filling machines.

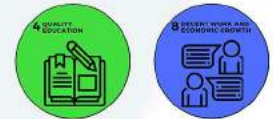

SUSTENTABILITY

FOOD

Our commitment to the world is to deliver safe, healthy and nourishing food, everywhere. Ill-considered handling of food in the whole chain of production is reason we put forward innovative solutions regarding the processing and packing of food. Fractioning the correct portion of micro and macro-nutrients is essential, approaching this issue, we've created the project "Pocket basket", which consists in a compact bundle of food, with the main ingredients for a healthy and nourishing diet, in the correct amount and with accessible pricing.

EDUCATION

We believe that education is the basis of a promising society, we're committed to promote growth and development to all of those directly and indirectly impacted by our machines.

Aiming to have a broader impact on this, we've idealized the "Profills School", which will offer courses and training to our collaborators, clients and partners and interested third parties thorough an e-learning platform and in-person classes on the food industry, commerce and conscious and sustainable consumption.

DEVELOPING THE FUTURE

To face the environmental, social and economic challenges of our society we need to convince individuals to work together on these goals, reducing food waste, improving the health and well-being of individuals and promoting a richer and more balanced diet by fractioning products to meet the ideal portions based on their nutritional value.

We offer accessible solutions to big corporations and small producers alike, we want to positively impact the life of these entrepreneurs and the people link adding value to their products, extending the products shelf life, and reducing food waste. Empowering the network built around the company through education, strategic information, and business opportunities.

of the 4.3 billion
of food produced annually
is wasted.

**At Profills,
we are deploying our
best to fix it!**

14 new machines designed last year.

More than **1000 machines**
up and running.

More than **31.5 thousand tons** of food
properly packed monthly
by our machines.

Our machines combine technology and innovation to automate and add to the production capacity of a variety of business, small or big, from food to cosmetics and everything in between.

To know more about our machines, scan the QR Code.

Profills proudly presents it's liquid and solid filling lines, producing sustainable, eye-catching and practical packing. We keep on revolutionizing the packing and filling market, allying quality, technology, the best components, and fair prices.

R&D

On the current moment societal changes are quick and being able to adapt is a requirement for those who want to evolve, to keep up with the pace of change, the way we manage our projects and research has changed and new practices and process have been adopted to enhance our projects and the equipment development.

Our research goes beyond packing, bringing together automation, connectivity, analytical intelligence and much more, making the 4th Industrial Revolution accessible.

Improving equipment uptime, reducing human-error derived downtime, making available the most advanced tools of production control to our clients.

Technology at your service

We deploy the best resources in the market to bring you the best solutions, our R&D team is tasked with pointing out the latest advances in the automation market, creating, planing, developing and building equipments adapted to the especific products of our client, improving operational performance at the production line.

Using the best tools in the market, with state-of-the-art software and equipment indispensable to the machine design process, our engineers, technicians and designers are always learning, always in search of the best available in the automation industry, moving towards continuous improvements of the production process.
