

EZPack Water Ltd. - Company Profile

EZPack Water Ltd. is a private Israeli company, which develops, manufactures and markets unique proprietary solutions for water storage, distribution and mobility. The company products are aimed to markets such as emergency, disaster relief, construction and mining industry, agriculture, military, home and outdoor, and others.

The company has developed the Water Storage & Distribution System (WSDS) – the most advanced system for portable water supply. The WSDS is the ultimate solution for water supply in various situations.

EZPack WSDS is approved by the Israeli Water Utilities for water distribution in emergency situation. EZPack is supplying the WSDS to the municipalities and water authorities in Israel.

Products and Systems

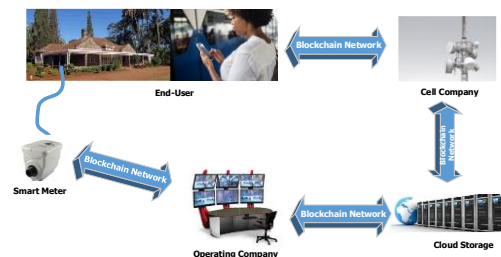

EZPuro™ - a robotic reverse-osmosis (RO) water purification or desalination system. EZPuro™ technology allows to purify 99.3% of all the contamination in the feed water. This implicates that EZPuro™ provides extremely pure water that can be used for many purposes with zero user intervention.

EZCond™ - an Atmospheric Water Generator (AGW) uses humid ambient air as a source for producing water. The EZCond™ is based on our innovative off-grid energy storage in large volume water bladders, and therefore requires less energy pre liter of water produced.

EZWaterBill™ is a blockchain based Water Billing System to facilitate water access for all. Our Water Billing System is a secure and reliable pre-paid water billing system. This system ensures the water providers are paid so that they can maintain their water supply. The system is based on prepaid wireless water meters; blockchain smart-contract payment and water allocation system; smartphone app; water management system.

EZPowerPack™ - a solar generator for production, storage and usage of electricity. The system serves both the off-grid market and the backup power market. The EZPowerPack™ offers three different capacities to support different use case between 300Wh up to 1280Wh.

EZPack has a full line of pillow ("bladder") water tanks from 10 liters (2.5 gallons) up to 24,000 liters (6,000 gallons). The EZPack water tank is built from 2 layers: the outside layer – very rigid PVC that can endure harsh terrains; the inside layer – an inner insert made of food-graded material approved for storing drinking water. The inner-insert is the most advanced water product for emergency use, and it is based on EZPack proprietary design and concept. EZPack products line is a comprehensive solution for water distribution – easy to store; quick to install; low cost. The WSDS does not require any maintenance and require very small space when stored.
