

High Quality Innovative Solutions.

 **MICROCLAR**

QUALITY CONTROL DIVISION

In the Quality Control Division we focus on providing innovative solutions that allow you to perform your controls and analyses in a fast, secure and reliable way.

Digester Bags

The essential tool to homogenize your solid samples. They are designed to offer a practical and reliable solution.

Sampling Bags

The ideal solution for transfer and storage of collected samples for quality control. Easy to open and with a practical hermetic closure.

Syringe Filters

For filtration of small volumes of aqueous solutions, organic solvents, aggressive solutions, air and gas hydrophobic venting, and HPLC.

Manifold

Totally manufactured in 316L stainless steel with sanitary adapters for monitors and different types of filtration funnels.

Culture Media

Culture media in plastic vials for the membrane filtration technique.

Membranes

The different technical specifications of the broad variety of materials allows you to find an option for each of the multiple laboratory filtration requirements.

Monitors

Sterile disposable filtering funnel and Petri dish all in one. Reduces risk of cross contamination and eliminates waste of time in sterilization processes.

Samplers

An innovative, practical, and reliable alternative to sample your liquid or solid products.

Filter paper

A wide variety of filtration papers to meet your qualitative or quantitative filtration needs in accordance with your analytical methods.

Contact dishes

Ideal for microbiological analyses of surfaces. Sterilized by gamma radiation. Available with different culture media or empty.

Petri Dishes

55 and 90 mm Petri dishes. Sterilized by gamma radiation. Available with different culture media or empty.

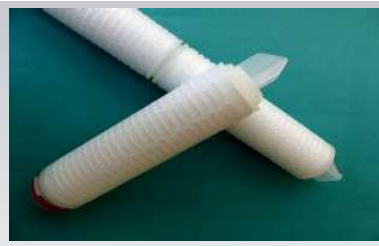

MICROCLAR

Specialists in Industrial Filtration Processes and Quality Control.

We have more than 30 years experience and a specialized team to help you improve your industrial filtration and quality control processes. Our **Quality Management System** is updated in accordance with **ISO 9001:2015** standards.

INDUSTRIAL PROCESS DIVISION

This Division offers the best product combination to optimize the performance of your filtration process.

Filtration Cartridges

The broadest product variety to suit each clarification, pre-filtration or final filtration requirements.

Capsules

The solution to cover the requirements of filtration process of small volumes of liquids or for air and gas venting.

Lenticular Modules

Ideal for pre and final filtration. Their internal structure provides a large filtration surface which ensures their performance longer periods of time.

Membranes

The specific characteristics of the Microclar membrane product line allows to adapt to different requirements of industrial processes.

Lenticular Modules Housings

These housings are manufactured with highly resistant materials that guarantee optimal performance of the filtration elements.

Filter Cartridge Housings

The essential element for your filtration cascade. They are manufactured with highly resistant materials that guarantee optimal performance of the filtration elements.
