### About Errth Flex

Make your construction project, whether new construction or remodeling, more beautiful and protected with the durable, flexible building coating by Errth Flex LLC.

Our stucco substitute product is easy to apply, non-cementitious, utilizes reflective pigments and is therefore resistant to cracking, fading even with severe weather.

Errth Flex comes in three forms: Three step, two coat and single coat. See our web site: [www.errthflex.com](http://www.errthflex.com) for details.

We created Errth Flex coatings to serve as a replacement for stucco. It is a "Green" product and It lasts for the life of the building and stand up to the strongest weather conditions.

Our stucco replacement product is made from recycled rubber and comes premixed and pre-colored in five gallon pails, so it only needs to be applied to the surface, and it helps remove used tires from land fills.
