

COMPANY PROFILE

Made in Italy Thermosealing Machines

ABOUT OUR FACTORY

J Pack is an Italian manufacturing company that has been active for years in designing and producing packaging machines for the food sector.

The experience we gained over forty years in the packaging sector has allowed us to develop solid technical skills.

Our mechanical and engineering know-how allows us to maintain high-quality standards and pay particular attention to our customers' needs.

CUSTOMIZED SOLUTIONS

We provide our customers a full service:

- Commercial and Marketing support
- Project feasibility analysis
- Design and customization of the mould
- Step-by-step technical assistance
- Training and after-sales support

OUR MACHINE RANGE

SEALING ONLY

A range of tabletop thermosealing machines that can meet the varied needs of food industry, deliveries and supermarkets.

MAP

Semi-automatic and automatic solutions, specifically designed for MAP technology

SKIN & OVERSKIN

Semi-automatic and automatic solutions for skin and overskin of protruding products on both trays and flat cardboards

INFINITY PATENTED MOULD

INFINITY is a patented device, developed to respond to the need for flexibility in the professional food packaging segment, maximizing efficiency and productivity.

The INFINITY system, by one unique modular mould, allows the user to seal in a few seconds a wide range of different trays sizes and materials (PP, Cardboards, and Bio trays).

This special application is perfect for the packaging of ready meals and is the ideal solution for supermarkets, deli shops and delivery.

PATENTED ELECTRICAL HANDLING

Thanks to our investments in Research and Development, we conceived a range of thermosealing machines with a fully electrical chamber handling system.

Thanks to this innovative system, it is possible to seal with MAP without using compressed air.

This is an environmentally friendly choice that allows concrete savings when it comes to maintenance.

SKIN PACKAGING

Skin technology has been conceived for answering the constantly evolving needs of the food sector. It combines vacuum technology with packaging in trays, giving a second protective skin to the product.

Led by our know-how, we developed a range of tray sealers especially conceived for satisfying the exigencies of small and medium industry that combines innovation and food technology.

AUTOSPEED PATENTED DEVICE

Our patented handling system AUTOSPEED is what defines our automatic compact machines.

Thanks to a set of photocells that works in combination with the innovative shuttle, the handling is automatically activated as soon as trays are detected in their loading position, making the sealing operation easier and quicker.

Machine productivity can be adapted to production needs. It is actually possible to switch from automatic to semiautomatic mode through a simple button.

ECO-FRIENDLY PACKAGING

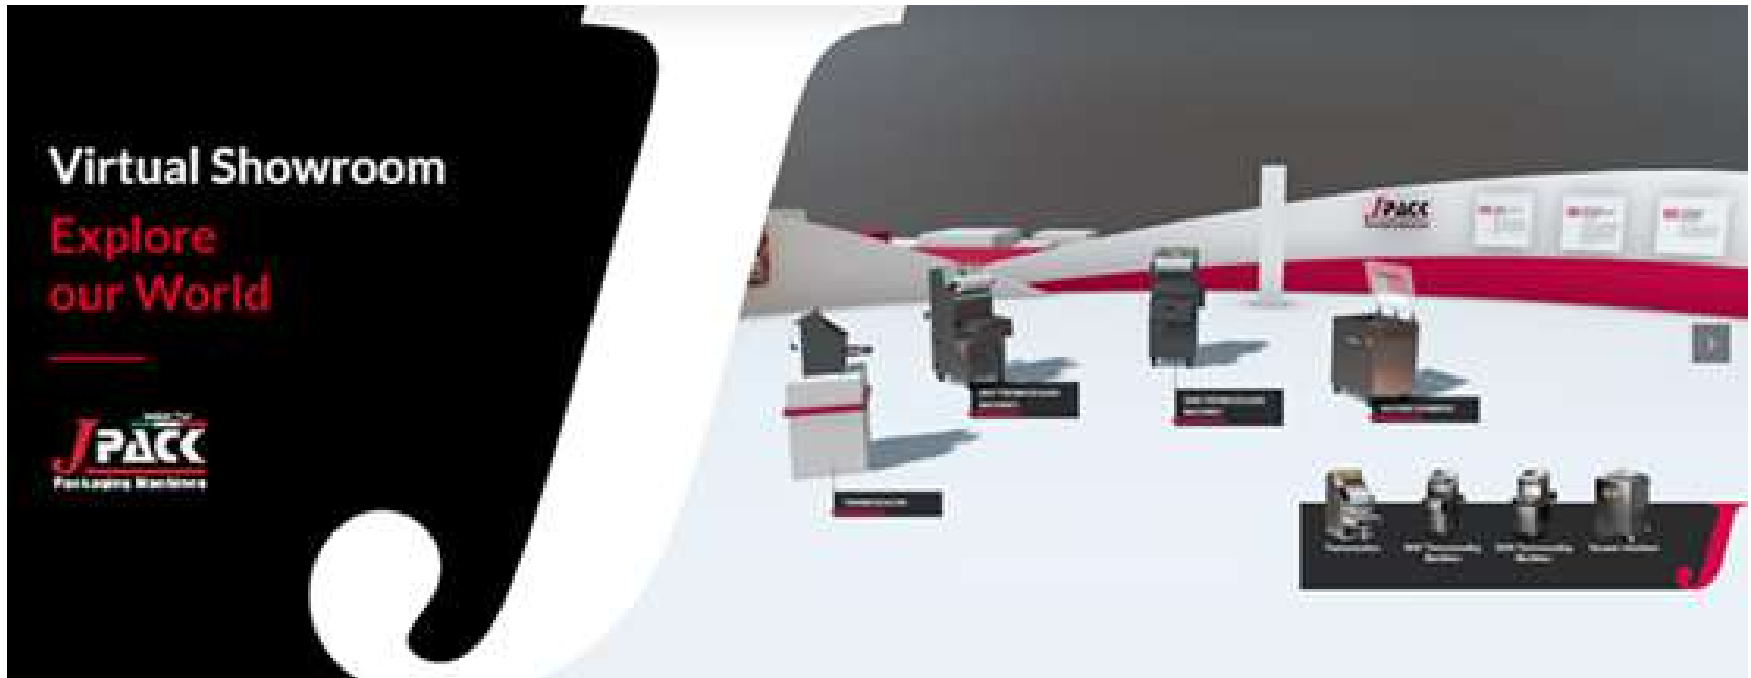

Since its birth, our company has been steadfastly attentive to environmental issues.

We are fully aware of the new environment-related challenges, and this is why we are actively engaged in the promotion of sustainable packaging.

We offer our customers a range of fully compostable sugarcane BIO trays, as well as a range of 100% recyclable cardboard trays.

VIRTUAL SHOWROOM

For a general overview of our thermosealing machines, we invite you to visit our virtual showroom

A 3D space where you can interact with our machines wherever you are with a single click, directly from your devices.

MADE IN ITALY

Years of experience in manufacturing, as well as a high degree of customization of the product, have made J Pack a worldwide leading Company in the food packaging sector.

IFFA

See you in Frankfurt at IFFA Exhibition -14-19 May - Hall 11.0 Booth B14
