WHO WE ARE

We are a new agricultural company that seeks the best quality of our products from sustainable perspectives and all the necessary care for the environment, from the choice of land to the selection of food so that the consumer has the best possible experience.

The company today has about 40 hectares for the production of highly selected Papaya Formosa that has a logistical advantage for its distribution and a beneficial climate for the plantation.

We do not forget the quality of life of our workers – in the insertion of women in the production process to essential medical assistance.

OUR LOCATION

Located in the center of Minas Gerais, in the rural area of Tomaz Gonzaga, and close to the state capital, LFG has logistics facilities for land and air transportation.

*Highway BR 135 – District of Tom Gonzaga – km
577, Curvelo – Minas Gerais – Brazil
ZIP: 35.797-899*

MISSION

We are committed to regional development and environmental management that prioritizes the improvement of the quality of life of employees and customers.

VISION

We aim to achieve greater participation in the domestic and foreign production market.

VALUES

We believe in sustainable growth and environmental policies at all stages of production; Respect for labor guidelines, and human rights.

OUR PRODUCTS

We expect an annual production of 100 tons of Formosa Papaya in an area of 40 hectares for February / 2020.

In association with local producers, we add the production of Red and White Onion with 50 tons of ready delivery in September / 2020.

For the 2021 Strategic Plan, we will add the production of other regional fruits in our catalog, such as bananas and grapes.

OUR ENVIRONMENTAL POLICIES

We comply with environmental guidelines following the legislation of the Brazilian government. We highlight our commitment to the environment and its preservation managed in an environmental reserve.

We are in the process of getting an international certificate of quality with a deadline before the second quarter of 2021.

We are concerned with good sustainable practices to avoid wasting water, as well as previous environmental studies to mitigate environmental impacts.
